

# Question Answering powered by OpenAI

## Without Context

### Creating a Model

```
CREATE MODEL openai_question_answerer  
PREDICT answer  
USING  
  engine = 'openai',  
  model_name = 'gpt-4',  
  prompt_template = 'Answer the following question.  
text:{{question}}.';
```

### Checking Model Status

```
Select status from models where  
name='openai_question_answerer';
```

### Querying the Model

```
Select answer from openai_question_answerer where question="Who is  
the CEO of MindsDB?"
```

### Dropping the Model

```
Drop model openai_movie_json_extractor;
```
